

Hazardous Chemicals? See it. Snap it. **REPORT IT.**

Months after CPSU representatives alerted management of serious safety issues, they've still not identified all Chemicals and Airborne Contaminants that you are being exposed to at work.

This is unacceptable.

Unsafe exposure to chemicals can kill or seriously injure workers.

DAWE can't keep you safe, provide adequate PPE & monitor health impacts without first identifying the hazardous chemicals they need to protect you from.

Your union is stepping up to fix the problems. First we are creating a register of all the chemicals workers are being exposed to, then we will take action to secure critical safety improvements.

We need your help! When you identify or find chemicals at work, please:

See it.

Snap it.

Report it.

Use the QR code or the web address below to report chemicals you find in your workplace.
